

Tilt Mount Template

- 1) Print this template at 100% (do not scale printing)
- 2) Locate a spot on a wall or surface where the Tilt unit will be mounted
- 3) Place two marks or points on the surface vertically spaced 1.375 " apart
- 4) Use screws or bolts* with a diameter up to 0.220 " to mount the bracket through the two mounting holes
- 5) Place the Tilt cover (including the rest of the unit) onto the wall mount bracket and fasten using the set screw located on the bottom of the Tilt bracket cover

* *Be sure to use mounting hardware suitable for your installation. Tilting the unit while mounted into a porous material such as drywall can cause the unit to become loose. Always mount to a stud or solid surface.*
